

SAFE-T-FIRST™

Featuring Johnsonite PERMALIGHT® Technology

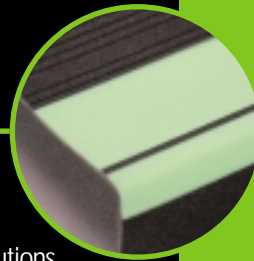

Interior Design Flooring Solutions

Johnsonite's rich tradition of creating innovative specialty flooring solutions continues with a new concept that integrates enhanced life-safety with design and functionality.

Safe-T-First™ features revolutionary PermaLight® technology that provides low-location, non-electrical illuminated egress pathways and access marking indicators to help guide building occupants to safety during blackout situations. PermaLight photoluminescent technology is integrated into Johnsonite's vinyl and rubber specialty flooring products.

Available in a wide range of colors, Safe-T-First floor and wall products can be used as a system or individually, depending on your application requirements. Safe-T-First products address the Americans with Disabilities Act (ADA) for slip-resistant flooring, visually impaired flooring and signage.

Johnsonite's non-electrical Safe-T-First System enables you to integrate design requirements with life-safety in one system solution.
