

# SAFE-T-FIRST™

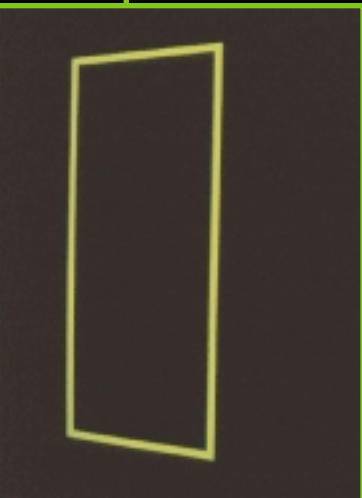

Featuring Johnsonite PERMALIGHT® Technology

## PermaLight® Marking Indicator Safety Solutions

Safe-T-First™ features revolutionary PermaLight® technology that provides low-location illuminated egress pathways and access marking indicators to help guide building occupants to safety during blackout situations.

Safe-T-First illuminated flooring system is complemented by a family of PermaLight photoluminescent solutions of signage, paints and marking indicators. These items may be used individually or with Johnsonite flooring solutions as a complete system, depending on your application requirements. Johnsonite photoluminescent paint, tapes and marking indicators allow you to highlight doorways and other access areas, such as electrical and facility utility areas, that must be reached during sudden power losses. Photoluminescent markings can be used to meet requirements where egress routing or location finding is a must.

Safe-T-First enables you to integrate design requirements with life-safety in one complete system.
